

Amanda Toledo

Frontend Engineer | React · React Native · TypeScript · Next.js

Vancouver, BC, Canada | +1 (672) 952-5460 | carvalhotp.amanda@gmail.com

<https://www.linkedin.com/in/toledo-amanda> | <https://github.com/toledo-amanda>

Work authorization: Canadian Permanent Resident

CORE SKILLS

Languages: TypeScript, JavaScript, HTML, CSS

Frontend: React, React Native, Next.js, Redux, Redux Toolkit, Zustand, Apollo Client, microfrontends, responsive UI, Smart TV / remote-control navigation

Styling & Design Systems: Tailwind CSS, Styled-components, Storybook, Figma-to-code implementation

Backend & APIs: Node.js, GraphQL, REST APIs, MongoDB, Mongoose, third-party API integration (Pagar.me payments)

Testing & Quality: Jest, React Testing Library, unit testing, integration testing, code review, 80% coverage on critical flows

Build, Tooling & CI/CD: Vite, Webpack, Git, CI/CD pipelines, Fastlane, iOS & Android release automation, Android SDK upgrades, Core Web Vitals, bundle optimization

AI-Assisted Engineering: Claude Code, Codex, GitHub Copilot, AI-assisted codebase audit, migration and refactoring

Product & Analytics: Amplitude SDK, event instrumentation, feature-adoption analysis

Domain: Digital banking, internet banking, mobile banking, back-office, Pix, payments, Central Bank of Brazil regulatory requirements, marketplaces, OTT streaming

PROFESSIONAL EXPERIENCE

MB Labs - Remote

Mobile and Frontend Engineer | November 2023 - Present

- **White-label digital banking platform:** built and maintained reusable, responsive interfaces across mobile banking, internet banking and back-office applications serving 26+ fintechs and traditional financial institutions, improving consistency, scalability and reliability across critical banking workflows.
- **Travelex Bank engagement:** assigned exclusively to Travelex Bank, partnering with backend, product, design and QA teams to clarify business rules, define API contracts and deliver secure digital banking products aligned with Central Bank of Brazil regulatory requirements.
- **Mobile platform modernization:** led a multi-release React Native migration from 0.71 to 0.77 and upgraded the Android SDK, refactoring native modules, replacing incompatible dependencies and removing dead code - reducing Android build times by 58%.
- **AI-assisted repository audit:** led an AI-assisted audit of a large frontend repository and created a modernization roadmap covering bundle optimization, dead-code and dependency removal, asset optimization, Core Web Vitals, library consolidation and dependency upgrades, contributing to a 43.2% reduction in bundle size.
- **AI-accelerated delivery:** reduced repeatable page-creation workflows from days to minutes using AI coding assistants to translate Figma designs into React interfaces, generate test scaffolding, accelerate refactoring and automate repetitive implementation work.
- **Cross-platform migration:** used AI-assisted codebase analysis to map and migrate Redux state, API integrations, component hierarchies, business rules and user flows from the Pix

Automatic mobile implementation to Internet Banking, accelerating delivery while preserving behavioral consistency across platforms.

- **Mobile CI/CD:** implemented Fastlane automation for mobile CI/CD, standardizing iOS and Android release processes, reducing manual publishing work and improving app store deployment reliability.
- **Test coverage:** raised release confidence to 80% test coverage with Jest and React Testing Library across critical banking flows, reducing regression risk in high-stakes financial applications.

Fretebras - Remote

Frontend Engineer | July 2021 - October 2023

- **Digital freight marketplace:** developed marketplace dashboard features used by 17K+ transport companies, centralizing driver-company communication within the platform to strengthen transaction security, service reliability and trust across a network of 800K+ drivers.
- **Microfrontend architecture:** led the design and implementation of a microfrontend architecture, reducing build and delivery times from 45 minutes to 6 minutes per project; decomposing large applications into independently deployable modules, minimizing cross-team dependencies and merge conflicts while accelerating release cycles.
- **Design system:** expanded the internal design system with reusable React components documented in Storybook, increasing UI consistency and reuse across platform dashboards.
- **Quality assurance:** strengthened release confidence with unit and integration tests, increasing coverage to 70% across critical user flows.
- **Product analytics:** integrated the Amplitude SDK and instrumented page views, clicks and key user interactions, giving product teams behavioral data to evaluate feature adoption, identify friction points and inform roadmap decisions.
- **Engineering community:** contributed to frontend chapter discussions on best practices, technology adoption, architectural decisions and code-review standards, promoting knowledge sharing and higher code quality across teams.

Hirix Software & Technology - Remote

Fullstack Developer | June 2020 - July 2021

- **OTT streaming platform:** built an end-to-end streaming platform for Rede Bandeirantes with React, TypeScript and Node.js (MERN stack), developing core features such as user authentication and using GraphQL and Apollo Client for efficient data fetching.
- **Multi-device experience:** delivered responsive experiences across web and Smart TV, optimizing remote-control navigation, rendering performance and bundle size for resource-constrained TV devices.
- **Backend and integrations:** developed GraphQL backend services by implementing resolvers and MongoDB data-access layers with Mongoose, and integrated the Pagar.me third-party API to support payment processing and transaction workflows.

EDUCATION

MSc in Psychobiology - Federal University of Rio Grande do Norte

Natal, Brazil, 2018

LANGUAGES

Portuguese (native) | English (fluent)
